Abstract

A great deal of research has been carried out on children as they transverse through the developmental stages or the motor skills acquisition period. This undertaken is then set to exploit a special avenue for an effective teaching and learning of the child through a representation of the English alphabets with visual symbols. This is in furtherance with a continuous search to enhance educational method that will be sacrosanct within the sets of value in child development. This unique accomplishment though practically oriented is aimed at opening the ear of the mind of the child as well as the eyes to the beauty of form and of visual symbols, as a panacea to a greater comprehension of the English alphabets which are basis for learning
